

The specter of BPL-borne radio frequency interference in the United States AM Broadcast and HF Amateur Radio Service and International Broadcast spectrum leads me to wonder if the Federal Communications Commission is serving the public interest, or selling FCC services to the highest bidder(s). BPL will only destroy MF and HF allocations, and is an unnecessary technology, considering the fact that such a small segment of the US population employs high - speed digital service. Too, the growth of high - speed digital services leaves a bit to be desired. I urge Chairman Powell and the OET to consider carefully and with great deliberation any action they may take in regard to BPL. Thank you for considering my remarks.
